NAME	**Donna Mae Fayloga**
PROJECT TITLE	**Axiom Core Enterprise HR System**
SUBJECT: **CODE:** **TIME:**	**IT15/L Integrative Programming and Technologies**
TOPIC (Type of Business Process)	**#7 Human Capital Management System (HCMS / HRIS)**
Products/Services	**HR Solutions for BPO Industry**
Tools Needed:	Visual Studio Code (VS Code), SQL Server Management Studio (SSMS), MonsterASP.NET, Vercel, draw.io, Domain Name, Postman
Technology:	Next.js, Lucide React, ASP.NET Core, Entity Framework Core (ORM), LINQ (Language Integrated Query), Cookies
Security Features	Authentication and Authorization, JWT-Based Authentication, Role-Based Access Control (RBAC), Password Hashing and Encryption, Automatic Session Timeout, Account Lockout Mechanism, Input Validation, Logging and Monitoring
Target user/s:	Employees, Hr, Manager, Admin
Subs System / Management Transaction/Modules	1. Employee Information System 2. Recruitment & Onboarding 3. Performance Evaluation System 4. Payroll & Compensation Management 5. HR Analytics & Reporting

LOGO	
Project Objectives:	The main goal of the Axiom Core HR system is to move a company's paperwork into a clean, organized digital space. First, it puts everyone's info in one safe spot so nothing gets lost or mixed up. Second, it makes performance reviews fair and automatic, using a system where coworkers and bosses can give feedback that the computer calculates instantly. Third, it keeps sensitive information like salaries and private files locked away, only showing them to the right people like HR or senior management. Finally, it gives employees more control by letting them check their own pay stubs and request time off from their phones or computers without having to email HR every time.
Project Description:	- This app is built for companies that have outgrown simple spreadsheets and need a real structure. It serves four main groups: the System Admins who keep the lights on and manage accounts; HR Staff who need to handle hiring and paychecks; Managers who need to see how their teams are doing; and Employees who just want a simple way to track their work life. Everyone using the system needs it to be fast, easy to understand, and most importantly secure so their private information stays private. -Axiom Core makes the workplace feel more professional and less stressful. By letting the computer handle the "busy work" like tracking attendance or calculating scores, people can spend more time on their actual jobs. For the company, this means fewer mistakes and a clear "paper trail" for every decision made. For the employees, it creates a sense of fairness because everyone is being measured by the same digital yardstick, and they can see their own progress and benefits whenever they want. -To build this, we used a mix of powerful and reliable tools. The "face" of the app that users see is built with Next.js and Tailwind CSS, which makes it look modern

	and work smoothly on both phones and computers. The "brain" that handles the data is built with ASP.NET Core (C#), a professional language used by big banks and tech companies because it is very strict about security. We store all the information in Microsoft SQL Server, which is like a high-tech filing cabinet that can hold massive amounts of data without slowing down. We chose these specific tools because they work together to prevent common glitches like the "Employee ID" errors we fixed earlier and ensure the system stays stable as the company grows.
Use Case Diagram (Role-Based Access)	 **Role-Based Access for Axiom Core Enterprise HR System** **Admin** ● Manage user accounts and roles ● Configure system settings ● Manage departments and permissions ● Access all administrative modules ● View system logs and reports **Hr** ● Process payroll records ● Review personnel audit trails and logs ● Check compliance and policy adherence ● Manage applicant tracking and recruitment ● Generate HR reports **Manager** ● View team reports and dashboards ● Read-only access to employee summaries ● Conduct peer and subordinate evaluations ● View department-specific attendance and performance ● No create, edit, or delete permissions for core system data **Employee** ● View personal profile ● View personal payslips ● Apply for leave and track requests ● Submit expense claims ● View personal attendance and overtime records
